

South Africa to UK Automotive Sponsorship Programme

The Challenge

The UK automotive sector is experiencing a well-documented shortage of qualified, trade-tested automotive professionals, making it increasingly difficult for employers to source and retain skilled talent locally. Our client required a sustainable solution to address ongoing skills gaps while maintaining compliance with UK sponsorship and immigration regulations.

Our Solution

Logic 360 South Africa designed and delivered our specialised Automotive Sponsorship Programme, bridging skilled talent from South Africa to the United Kingdom.

This included identifying and engaging suitably trade-tested candidates, conducting in depth screening and interviews, and presenting a high quality shortlist for the client's final selection. Beyond recruitment, our team provided comprehensive support with immigration and sponsorship documentation, ensuring a compliant and seamless relocation process for each successful candidate.

The Outcome

Since February 2024, 33 skilled automotive professionals have been successfully placed and relocated to the UK, where they are now thriving in their roles. The programme enabled the client to fill critical skills shortages efficiently while reducing time-to-hire and recruitment risk.

Roles Recruited

- Trade-Tested Automotive Technicians
- Trade-Tested Panel Beaters
- Trade-Tested Spray Painters

Key Impact

This programme demonstrates Logic 360 South Africa's ability to deliver cross-border, end-to-end people solutions, combining specialist recruitment, sponsorship compliance, and structured onboarding to solve complex workforce challenges in high-demand sectors.
